

Leak-free and Condensation-free Guarantee for 10 years
at -40°C to +50°C is guaranteed

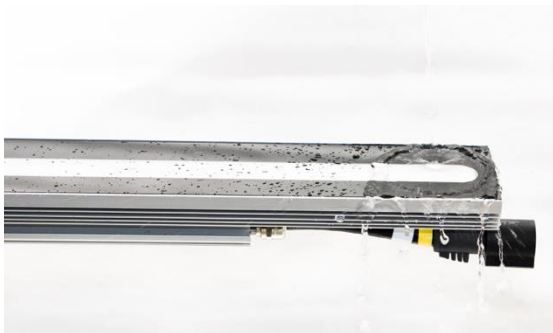

Chameleon RGBW™ Bar Low Profile - Durable and virtually maintenance free high-end LED luminaire, is designed to last in extremely harsh environments. Leak-free and condensation-free fixtures based on a time proven proprietary sealing technique and cutting edge design.

Highly precise machined enclosure made from a solid aluminum extrusion. The Chameleon RGBW bar low profile luminaire has no assembled parts, no end-caps, no seams, gaskets or seals and therefore no weak points to fail.

We have challenged ourselves to design the best Moisture Control System to eliminate any vapors that can be entrapped during assembly. Scientifically calculated hygroscopic substances sustain a state of dryness during the entire life of fixture.

Outstanding long-term sealing performance. A dependable combination of moisture barrier and all-round sealing technique prevents dripping water from penetrating inside the luminaire. Innovative material compositions ensure that the seals will provide IP66 protection for the entire life of the fixture.
